

tania shafiee

front-end

Profile

Frontend Developer with experience building and maintaining web applications using React.js, Next.js, and TypeScript. Skilled in developing reusable components, scalable frontend structures, Design Systems, RESTful APIs, WebSocket/SignalR, and responsive user interfaces, with a focus on clean code, maintainability, and user experience.

Education

- Master in Technology and Information Management
Science and Research Branch
Oct 2026 - Sep 2026

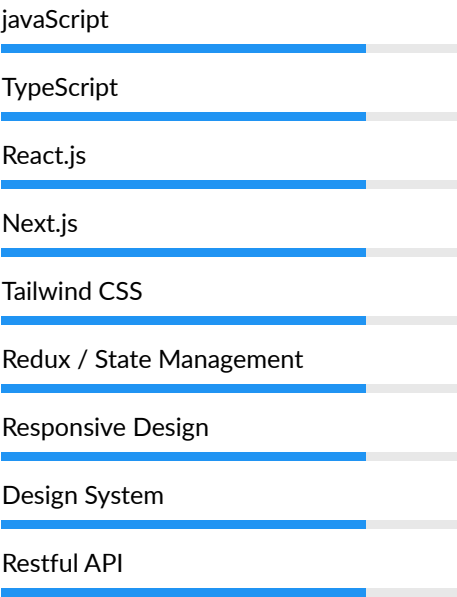

Employment History

- Frontend developer
Hooshmand Sepehr
1403
 - * Developed and maintained web applications using React.js, Next.js, and TypeScript, with a focus on code quality, maintainability, and user experience.
 - * Designed and implemented scalable and maintainable frontend architectures and project structures.
 - * Developed reusable components and established consistent structures for cross-project reuse.
 - * Designed and implemented Design Systems, standardized UI components, and frontend development patterns.
 - * Built responsive and RTL interfaces with a focus on usability and cross-device compatibility.
 - * Developed interactive features and implemented complex, multi-step business workflows on the frontend.
 - * Integrated frontend applications with RESTful APIs and backend services, including data management and client-side integration.
 - * Worked with Next.js rendering strategies, including SSR, and addressed performance and hydration-related issues.
 - * Evaluated technical solutions and libraries based on project requirements and contributed to frontend technical decisions.
 - * Maintained projects across different environments and managed required configurations and environment variables.
 - * Contributed to multi-application frontend structures and solutions for sharing code and reusable components across projects.

Projects

- **SET System — Bank Saderat**

Designed and developed the frontend architecture using Next.js App Router.

Built responsive UI components using Tailwind CSS and Ant Design with a focus on reusability.

Implemented authentication and authorization using Middleware to control user access to pages and system features.

Developed complex multi-step workflows and forms with validation and error handling.

Implemented responsive layouts for Desktop, Tablet, and Mobile devices.

Integrated RESTful APIs and managed client-side data and application state.

- **Bank Saderat Internal Systems**

Designed and developed frontend architecture using Next.js Pages Router.

Improved application performance through optimized data fetching and Server-Side Rendering (SSR).

Implemented Middleware-based authentication, authorization, and privilege-based access control.

Developed reusable UI components using Tailwind CSS.

Implemented responsive interfaces for Desktop, Tablet, and Mobile devices.

Developed a file upload system with progress tracking, status management, and error handling.

Implemented an in-browser PDF viewer for displaying documents.

Implemented video capture using the device's front-facing camera, including camera permissions, recording, and video submission for user identity verification.

Integrated frontend applications with RESTful APIs.

Developed a modular and maintainable project structure to support long-term development and maintenance.

- **Online Library**

Designed and developed a user-friendly interface for an online library using Next.js Pages Router.

Implemented reusable UI components with Tailwind CSS.

Developed book search and filtering functionality based on categories.

Improved application performance using techniques such as Lazy Loading.

Implemented responsive layouts for Desktop, Tablet, and Mobile devices.
